HiPi™ One-step 5x RT-PCR Premix 96 tubes

Product Description	Quantity	Cat. No.	Vol	Remarks
HiPi™ One-step 5x RT-PCR Premix 96 tubes	96 tubes (0.2ml tube)	EBT-1221	4 µl /tube	5x ready-to-use mix

Description

Elpis Biotech's HiPi One-step 5x RT-PCR Premix is a mixture of HiPi thermostable DNA polymerase, M-MLV reverse transcriptase, dNTPs, reaction buffer, and stabilizer. Users can perform RT-PCR by simply adding total RNA or poly(A) RNA as substrate and specific primer pair to the premix. HiPi One-step PCR Premix also contains glycerol and bromophenol blue as a tracking dye, enabling a direct analysis of PCR products on a analytic gel electrophoresis. Stabilizer in premix enables prolonging a shelf life at -20°C. You do not need to dissolve the mixture prior to RT-PCR reaction as does competitor' freeze-dried one. By using HiPi One-step 5x RT-PCR Premix, users can obtain RT-PCR results in a single cycling process. The composition is optimized to reduce non-specific amplification and to minimize primer-dimer formation.

Storage Buffer

1 unit/4 µl thermostable DNA polymerase, 50 units/4 µl MMLV-RT in 50 mM Tris-HCl, pH8.3, 250 mM KCl, 10 mM MgCl₂, 0.05% bromophenolblue, 12% glycerol, and stabilizer.

Application(s)

One-step RT-PCR.

QC tests

Activity, SDS-PAGE purity, performance tests.

Storage Condition

Store at -20°C for one month, -70°C for a long time.

Usage Information (protocol)**RT-PCR reaction mix (Total 20 µl)**

RT-PCR premix	4 µl
Template (total RNA)	100-500ng
Specific primers	5 pmol each
RNase free distilled water	up to 20 µl

RT-PCR reaction condition (100 bp -1 kbp)

42°C	20-30min	
94°C	5min	} x 25-45
94°C	30sec	
50-60°C*	30sec	
72°C	45sec	
72°C	5min	

* : Primer의 melting point 에 의해 결정
